Seismic Design of Reinforced Concrete Buildings Jack Moehle 2014-10-06

Complete coverage of earthquake-resistant concrete building design Written by a renowned seismic engineering expert, this authoritative resource discusses the theory and practice for the design and evaluation of earthquakeresisting reinforced concrete buildings. The book addresses the behavior of reinforced concrete materials, components, and systems subjected to routine and extreme loads, with an emphasis on response to earthquake loading. Design methods, both at a basic level as required by current building codes and at an advanced level needed for special problems such as seismic performance assessment, are described. Data and models useful for analyzing reinforced concrete structures as well as numerous illustrations, tables, and equations are included in this detailed reference. Seismic Design of Reinforced Concrete Buildings covers: Seismic design and performance verification Steel reinforcement Concrete Confined concrete Axially loaded members Moment and axial force Shear in beams, columns, and walls Development and anchorage Beam-column connections Slab-column and slab-wall connections Seismic design overview Special moment frames Special structural walls Gravity framing Diaphragms and collectors Foundations

Site Characterization in Karst and Pseudokarst Terraines Richard C. Benson 2015-09-24 This book provides a practical strategy for obtaining a more complete and accurate geologic site characterization. The strategy and methods to characterize complex geologic settings are readily available. The strategy utilizes readily available technology, basic science and good, old-fashioned common sense resulting in a solid understanding of geologic and even karst or pseudokarst conditions. We provide an introduction to many off-the-shelf methods available for site characterization as well as examples of their application throughout the book. The purpose of a geologic site characterization is to understand the 3-dimensional geologic framework, along with the engineering and hydrologic properties of a site including any man-made impacts. A well-done site characterization is the cornerstone of all geotechnical, groundwater and environmental projects. The geologic conditions, particularly karst conditions, can significantly impact a site including its structural stability, groundwater pathways and potential for rapid transport or traps for contaminants. Once we have adequately characterized the geologic conditions can we carry our remediation, design and construction, model

flow, and make risk assessments that are accurate and reliable.

Cities' Identity Through Architecture and Arts Yasser Mahgoub 2020-11-28 This book covers a broad range of topics relating to architecture and urban design, such as the conservation of cities' culture and identity through design and planning processes, various ideologies and approaches to achieving more sustainable cities while retaining their identities, and strategies to help cities advertise themselves on the global market. Every city has its own unique identity, which is revealed through its physical and visual form. It is seen through the eyes of its inhabitants and visitors, and is where their collective memories are shaped. In turn, these factors affect tourism, education, culture & economic prosperity, in addition to other aspects, making a city's identity one of its main assets. Cities' identities are constructed and developed over time and are constantly evolving physically, culturally and sociologically. This book explains how architecture and the arts can embody the historical, cultural and economic characteristics of the city. It also demonstrates how cities' memories play a vital role in preserving their physical and nonphysical heritage. Furthermore, it examines the transformation of cities and urban cultures, and investigates the various new approaches developed in contemporary arts and architecture. Given its scope, the book is a valuable resource for a variety of readers, including students, educators, researchers and practitioners in the fields of city planning, urban design, architecture and the arts.

Concrete for the Modern Age Developments in materials and processes Dr Atef Badr 2017 This volume presents a wide-ranging review of the latest developments in concrete technology that have been largely missing from the global conference circuit. It the first major international event under the auspices of the Institute of Concrete Technology (ICT) and is appropriately located in the Middle East at the heart of a construction boom. Themes covered include admixture technology, durability, mix design, special cements and supplementary materials, reinforced concrete and sustainability. The 39 papers provide interesting theory and applicable practice blended with research findings – from the application of 3D printing to performance-based specifications and the role of concrete in the development of Oman – to produce a volume of value to many engineers and technologists. Founded in 1972, The Institute of Concrete Technology (ICT)'s mission is to preserve and promote concrete technology as a recognised engineering discipline and consolidate the professional status of practising concrete technologists worldwide. It is the concrete sector's professional development body, operating internationally, with some 500 members in more than 30 countries. It is an awarding body for qualifications in concrete technology and a facilitator of continuing professional development (CPD) and networking opportunities. Our partner in this conference, The Military Technical College in Muscat, Oman, was established with the intent of becoming a Center of Excellence in engineering education. Located in one purpose-built, state-of-the-art, well-resourced center, the intent is that MTC will be amongst the world's best in the

field of military and applied non-military technological education and training providers in the world.
