Manual of Historico-Critical Introduction to the Canonical Scriptures of the Old Testament Karl Friedrich Keil 2004-03-17 C.F. Keil was a scholar strongly committed to confessional theology. His dogmatic-confessional approach is particularly evident in his approach to the Pentateuch. He strongly supported Mosaic authorship of the Pentateuch and rejected attempts to explain extraordinary events in the history of Israel as anything but miraculous, divine intervention. Keil showed much interest in the historical development of divine revelation. Viewing the prophets as persons who were able to perceive future trajectories of God's saving acts, he presented history and revelation as interdependent rather than fundamentally dissimilar. Prophetic predictions then find their fulfillment in the historical person of Christ. This introduction to the Old Testament reveals Keil's foundational presuppositions - presuppositions which shaped his contribution to the well-known and influential Keil-Delitzsch 'Biblical Commentary', which includes Keil's commentaries on all the books from Genesis to Esther, Jeremiah, Ezekiel, Daniel, and the Minor Prophets.

Practical General Practice E-Book Adam Peter Staten 2019-06-10 Practical General Practice is a highly practical manual, specifically designed for use during the consultation process. Containing over 1000 conditions, the unique underlying structure of the book allows the GP to see immediately what treatment is recommended and why. All recommendations are highly specific - giving a firm guide to the GP during the consultation process rather than a list of possibilities that the GP might wish to consider. Bullet points for action which give the GP an immediate summary of the issues that must be covered in the consultation. Bullet points of the key evidence which justifies those recommendations. All chapters thoroughly revised, to reflect changes in the evidence, and in major guidelines, since the last edition. NNT values provided when available

Measuring Innovation A New Perspective OECD 2010-05-25 Measuring Innovation is a major step towards evidence-based innovation policy making. It complements traditional "positioning"-type indicators with ones that show how innovation is, or could be, linked to policy.

Manual de informática forense II Luis Enrique Arellano González 2021-06-03 Hace ocho años, la Informática Forense era solo una asignatura en vías de desarrollo, apenas conocida entre la mayoría de los profesionales de la Criminalística, gestionada por muy pocos y casi aislada de las disciplinas que le dan razón de ser: el Derecho, la Criminalística y la Informática. En la presente publicación, el orden que mostramos no es antojadizo ni aleatorio, sino que indica un camino a seguir por todo aquel que desea desempeñarse como perito en la materia. Hoy el panorama ha cambiado -entre otras razones por la amplia difusión y recepción que tuvo el Manual de Informática Forense, ofrecido a los lectores por esta misma Editorial (2011)- y nuevamente nos encontramos con la Prof. Ing. María Elena Darahuge (práctica-procedimental) y el Prof. Ing. Luis Enrique Arellano González (desarrollo teórico-conceptual), quienes, con el auspicio de la Facultad Regional Avellaneda (Universidad Tecnológica Nacional), han complementado la obra antedicha, ampliando sus alcances sobre los componentes informáticos móviles (iPod, iPad, tablet, telefonía celular) y especificando temas de permanente actualidad, tales como la "cadena de custodia informático forense", que tanto ha dado que hablar en el entorno jurisprudencial durante el año 2012. Este Manual se integra al anterior a fin de brindar un instrumento organizado conceptual y procedimentalmente a los operadores del Derecho (jueces, funcionarios judiciales, abogados de la matrícula), ingenieros, licenciados y peritos en Informática, Sistemas o Computación, licenciados en Criminalística, profesionales y empresarios que aspiren a una visión clara y sencilla de la Problemática Informático Forense, para resolver situaciones cotidianas y darle soporte a sus decisiones. Esperamos que esta obra les proporcione la utilidad y claridad pretendidas.

Tropical and Subtropical Fruits Muhammad Siddiq 2012-08-07 Tropical and sub-tropical fruits have gained significant importance in global commerce. This book examines recent developments in the area of fruit technology including: postharvest physiology and storage; novel processing technologies applied to fruits; and in-depth coverage on processing, packaging, and nutritional quality of tropical and sub-tropical fruits. This contemporary handbook uniquely presents current knowledge and practices in the value chain of tropical and subtropical fruits world-wide, covering production and post-harvest practices, innovative processing technologies, packaging, and quality management. Chapters are devoted to each major and minor tropical fruit (mango, pineapple, banana, papaya, date, guava, passion fruit, lychee, coconut, logan, carambola) and each citrus and non-citrus subtropical fruit (orange, grapefruit, lemon/lime, mandarin/tangerine, melons, avocado, kiwifruit, pomegranate, olive, fig, cherimoya, jackfruit, mangosteen). Topical coverage for each fruit is extensive, including: current storage and shipping practices; shelf life extension and quality; microbial issues and food safety aspects of fresh-cut products; processing operations such as grading, cleaning, size-reduction, blanching, filling, canning, freezing, and drying; and effects of processing on nutrients and bioavailability. With chapters compiled from experts worldwide, this book is an essential reference for all professionals in the fruit industry.

Topical Issues in Pain 2 Louis Gifford 2013-09-09 This is the second volume in the series stimulated by/deriving from the work and study days of the Physiotherapy Pain Association. This volume is about some fundamental changes in practice which aim to prevent chronic incapacity from musculoskeletal pain problems. It is also about our relationships with our patients, and theirs with their pain and their families. As such, the information provided is essential to all professions involved in physical rehabilitation and prevention of chronic incapacity. When practice changes there is a necessary extension of traditional thinking into new territories and new skills to be taken on. In particular, all the chapters in this book underline the recognition that while musculoskeletal pain has a biomedical origin, there are also important psychosocial components that require management within a biopsychosocial framework. Authors provide background knowledge and practical guidance to help readers integrate the biopsychosocial model and biopsychosocial assessment into patient management. The material in this book is as important to the management of acute pain as it is to chronic pain states. Importantly, the book is not about categorising patients as having either real or not real pain. It represents a determined effort by all the authors to present clinicians with tools that will help them to better understand their patients; help prevent them becoming disabled, and help most to lead far more active and productive lives – no matter how complex the presentation. Volumes in the Topical Issues in Pain series are written by clinicians for clinicians. Each volume reviews the literature and presents best practice in a lively and understandable text. All clinicians will benefit from the straightforward advice. I look forward to this series and to the activities of the Physiotherapy Pain Association because they promise to revolutionise the morale, dignity and way of thinking of physiotherapists and thereby to affect everyone concerned with pain. Advanced Information Networking and Applications Leonard Barolli 2021 This book covers the theory, design and applications of computer networks, distributed computing and information systems. Networks of today are going through a rapid evolution, and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low-power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence and actuations is emerging as a critically important disruptive computer class based on a new platform, networking structure and interface that enable novel, low-cost and high-volume applications. Several of such applications have been difficult to realize because of many interconnections problems. To fulfill their large range of applications, different kinds of networks need to collaborate, and wired and next-generation wireless systems should be integrated in order to develop high-performance computing solutions to problems arising from the complexities of these networks. The aim of the book "Advanced Information Networking and Applications" is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications.
