De Noordzeemoorden 2 IJskoud Isa Maron 2014-12-06 Op een koude novemberdag worden de doorgewinterde rechercheur Maud Mertens en de jonge Kyra Slagter weer samengebracht door een mysterieuze zaak. Twee jonge kinderen verdwijnen op bijna hetzelfde moment. Hoewel de politie met man en macht onderzoek doet, kan dat niet voorkomen dat er de volgende dagen meer kinderen ontvoerd worden. Er is geen enkele connectie tussen de verdwijningen: ze vinden overal in West-Nederland plaats, de kinderen zijn tussen de acht en twaalf jaar oud en er wordt geen losgeld geëist. Diverse Amber Alerts leveren niets op. Hoe meer kinderen verdwijnen, hoe groter de onrust in het land wordt. Voor Mertens vormen de verdwijningen een onwelkome herinnering aan een oude zaak waarin een jong meisje slachtoffer werd. Toch maakt dit juist dat ze verbeten achter de ontvoerders aan gaat. Kyra weet wat het is als een familielid wordt weggerukt en je vol vragen achterblijft: ontvoerd, vermist, vermoord? De zaak spoort haar nog meer aan haar eigen vermiste zus te vinden: vier jaar geleden verdween Sarina, zonder spoor of bericht. Tot Kyra ineens een briefkaart van Sarina ontvangt. IJskoud is het tweede deel in de spannende serie De Noordzeemoorden! 'Een mooie mix van gruwel en Hollandse "gewoonheid", onberispelijk en met veel vaart geschreven.' VN Thrillergids over De Noordzeemoorden 1 G-Strings and Sympathy Katherine Frank 2002-12-05 An ethnography of the customers of strip clubs where the author performed.
Voor altijd kerst Susan Mallery 2021-03-30 Fool's Gold - Voor altijd kerst Fool's Gold lijkt de ideale woonplaats, maar er is één probleem: er wonen te weinig mannen... Noelle Hopkins heeft net een tweede kans in het leven gekregen en is vastbesloten alles eruit te halen wat erin zit! And how to End it Brian Clements 2008 Poetry. This collection of prose poems explores the expansiveness of language as it ranges over particle physics and cosmology, and in how texts network with other texts (some of the poems were generated from other texts, from Google searches, through "interactions" with random texts). Interstitial poems between sections provide structure for the book; built entirely from language that appears elsewhere in the book, they progress according to the Fibonacci sequence, which determines first the number of words in each poem, then the number of words and the number of syllables as the numbers grow larger. Also available from SPD is Brian Clements's collection DISAPPOINTED PSALMS. He edits the small press Firewheel Editions and its Sentence: A Journal of Prose Poetics and coordinates the MFA in Professional Writing at Western Connecticut State University.
Mission Jupiter Daniel Fischer 2001-06-28 In this exciting story of the Galileo mission to investigate

Jupiter, noted astronomer Daniel Fischer weaves together the many disparate facts learned about this most fascinating planet and its satellites. Fischer tells the entire story of Galileo: a behind-the-scenes look at its difficult course from idea to reality; its launch; the problems it encountered early on and how these were resolved; and finally, what will become of the probe. Along the way, the author describes what we have learned about Jupiter, including what the Jovian atmosphere is really like, and the peculiar reality of the planets magnetic field. The story of the journey to Jupiter is combined with interesting details about Galileos capacities and a graphic description of the solar system, with an episode on how Galileo would judge the chances of finding life on Earth. The book concludes with a look at the future, closing on the Cassini probe to Saturn. Beautifully illustrated and well written, Mission Jupiter shows us space exploration at its best and clearly and vividly conveys the essential science.

Satellites of the Outer Planets David A. Rothery 1999 In particular he shows how tectonic and volcanic processes, driven by heat from within, have shaped the rigid outer layers of these worlds. Rothery also discusses the similarities and differences among them and the ways in which they resemble Earth-like planets."--BOOK JACKET.

Interplanetary Magnetohydrodynamics L. F. Burlaga 1995-09-07 Data from spacecraft such as Pioneer, Vela and Voyager have revealed the interstellar medium to be a remarkable physical system, which has served as a laboratory for the study of turbulent, supersonic, ideal magnetohydrodynamic (MHD) flows. The results of these studies provided confirmation of many theoretical models of the interstellar medium.

Robots in Space Roger D. Launius 2008-01-07 Given the near incomprehensible enormity of the universe, it appears almost inevitable that humankind will one day find a planet that appears to be much like the Earth. This discovery will no doubt reignite the lure of interplanetary travel. Will we be up to the task? And, given our limited resources, biological constraints, and the general hostility of space, what shape should we expect such expeditions to take? In Robots in Space, Roger Launius and Howard McCurdy tackle these seemingly fanciful questions with rigorous scholarship and disciplined imagination,

jumping comfortably among the worlds of rocketry, engineering, public policy, and science fantasy to expound upon the possibilities and improbabilities involved in trekking across the Milky Way and beyond. They survey the literature—fictional as well as academic studies; outline the progress of space programs in the United States and other nations; and assess the current state of affairs to offer a conclusion startling only to those who haven't spent time with Asimov, Heinlein, and Clarke: to traverse the cosmos, humans must embrace and entwine themselves with advanced robotic technologies. Their discussion is as entertaining as it is edifying and their assertions are as sound as they are fantastical. Rather than asking us to suspend disbelief, Robots in Space demands that we accept facts as they evolve.
The Quest For Alien Planets Paul Halpern 1997-08-21 Details the important discoveries of the first known worlds beyond the solar system; explores the search for planets similar and alien to Earth.
Seeking the Truth from Mobile Evidence John Bair 2017-11-17 Seeking the Truth from Mobile Evidence: Basic Fundamentals, Intermediate and Advanced Overview of Current Mobile Forensic Investigations will assist those who have never collected mobile evidence and augment the work of professionals who are not currently performing advanced destructive techniques. This book is intended for any professional that is interested in pursuing work that involves mobile forensics, and is designed around the outcomes of criminal investigations that involve mobile digital evidence. Author John Bair brings to life the techniques and concepts that can assist those in the private or corporate sector. Mobile devices have always been very dynamic in nature. They have also become an integral part of our lives, and often times, a digital representation of where we are, who we communicate with and what we document around us. Because they constantly change features, allow user enabled security, and or encryption, those employed with extracting user data are often overwhelmed with the process. This book presents a complete guide to mobile device forensics, written in an easy to understand format. Provides readers with basic, intermediate, and advanced mobile forensic concepts and methodology Thirty overall chapters which include such topics as, preventing evidence contamination, triaging devices, troubleshooting, report writing, physical memory and encoding, date and time stamps, decoding Multi-Media-Messages, decoding unsupported application data, advanced validation, water damaged phones, Joint Test Action Group (JTAG), Thermal and Non-Thermal chip removal, BGA cleaning and imaging, In-System-Programming (ISP), and more Popular JTAG boxes – Z3X and RIFF/RIFF2 are expanded on in detail Readers have access to the companion guide which includes additional image examples, and other useful materials

Astronomy Michael Zeilik 1988-01-26 This new edition of the classic astronomy text contains new information on the Voyager 2 mission to Uranus, Halley's Comet, superclusters and voids, and the inflationary universe model. Other new material covers image processing, solar activity and seismic studies, and high-energy astrophysics. Chapters have been carefully revised and there is much new artwork. Style is informal and non-mathematical, and development of the material progresses smoothly from the concrete to the abstract. The main theme of cosmic evolution and the sub-theme of scientific model-building are carried through the book's four parts: a history of cosmology, the solar system, stars and steller systems, and current speculations. Chapters include new lists of key terms, new problems incorporating algebra, and multiple-choice questions keyed to learning-objectives. A seasonal star chart has also been added.
JUPITER 2E BEEBE R 1994-09-17 In this book, Reta Beebe provides a full introduction to the jovian system, describing the planet's atmosphere, winds, and the swirling clouds, such as the Great Red Spot, that they create. She discusses models of the interior of the planet, the differences between its satellites (or moons), its equatorial rings of debris, and its magnetosphere: the interactive region around the planet created by its magnetic field. Considered a substellar companion to the sun - because it radiates more heat than it receives from the sun and has a similar chemical composition - Jupiter is thought to have no solid surface below the visible clouds. Among astronomers, it is seen as a laboratory in which to test theories of planet and star formation. Reviewing the history of discoveries about Jupiter, Beebe shows how our early earthbound knowledge was greatly expanded by the data from the Pioneer and Voyager spacecraft that journeyed past the planet in the 1970s. She also speculates - drawing on the

sophisticated models and theorems that underlie all planetary science - on the results of the Galileo Mission (launched in 1989, it is expected to fly by Jupiter in 1995) and discusses the possibly more dramatic July 1994 collision of the Comet Shoemaker-Levy 9, hurtling toward Jupiter at 130,000 miles an hour with a mass of nearly six trillion tons.

Physics of Planetary Rings Alexei M. Fridman 1999-07-02 This monograph presents the first comprehensive and detailed explanation for the planetary rings of Saturn, Uranus, Jupiter, and Neptune, exploring their striking, recently discovered structures such as narrow ringlets, spiral waves, and chain of vortices. This authoritative book is written in an accessible and engrossing style and is supplemented with an array of informative illustrations that will be of interest to professional and amateur astronomers, physicists, and students.
Mission to Saturn David M. Harland 2002-09-20 Saturn is back in the news! The Cassini/Huygens spacecraft, a joint venture by NASA and the European Space Agency, is on its way to Saturn, where it will arrive in July 2004. During 2005 it will explore beneath the clouds of Titan, Saturn's largest moon and possible home for extraterrestrial life. There are, as yet, no books devoted to the Cassini/Huygens mission aimed at the 'space enthusiast' market. David Harland's book explains how the Cassini/Huygens mission was planned, how it operates, and how its observations will fit in with our existing knowledge of the Saturn system.
Alien Volcanoes Rosaly M. C. Lopes 2008-05 At once terrifyingly destructive and awe-inspiringly beautiful, volcanoes have long fascinated humankind. From Vesuvius and Etna to Krakatau and Mount Saint Helen’s, these molten rock- and ash-spewing geysers have destroyed whole cities and countless lives, and altered the course of history. Yet our understanding of volcanoes on Earth—and throughout the celestial world—remains maddeningly incomplete. With Alien Volcanoes, Rosaly M. C. Lopes and Michael W. Carroll offer a dynamic tour of volcanic activity across the solar system. Through eight gracefully written chapters laced with gripping photographs and stunning artwork, Lopes and Carroll survey the complete spectrum of volcanism in time and location, from the solar system’s origin to the modern era and from the familiar shield volcanoes of the terrestrial worlds to the bizarre superchilled geysers on distant ice moons. In the process, they entertain the possibility of hidden lakes on Saturn’s moon Enceladus, discuss the potential effects of greenhouse gases on Neptune’s moon Triton, reconstruct the last moments of life for Pompeiians in the face of an erupting Mount Vesuvius, and explain how a 4,000-mile-long river of lava could have once flowed freely across the plains of Venus. Richly illustrated with original paintings supplemented by NASA and European Space Agency photographs, Alien Volcanoes advances our knowledge of volcanoes on other heavenly bodies, enhances our ability to comprehend how they came into being on Earth, and describes how we might better predict the impact of future eruptions.

Koop nooit een rode jas Sylvia Witteman 2014-12-03 Nora Ephron schreef de scenario's van films als When Harry met Sally, Sleepless in Seattle, You've got Mail en Julie and Julia. We kennen haar ook van de roman Hartzeer en maagzuur, het pijnlijk eerlijke en hilarische verslag (met recepten!) van haar echtscheiding. Starsailing Louis Friedman 1988 Louis Friedman, Executive Director of the Planetary Society, presents the first comprehensive look at the science and history behind solar sailing and other designs for space travel. Serious science readers and space buffs alike will be fascinated by designs for the square sail, disk sail, and the heliogyro (which features flexible sails many kilometers long). Friedman compares solar sailing to other proposed propulsion sytems such as ion drives and laser propulsion, and takes an insider's look at the million-dollar JPL project of the late '70s, which was the first attempt at a working model. Illustrated.
